

Abhishek Vetal

Navi Mumbai | +91 8591299244 | abhishek.vetal.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Full-stack developer who has deployed two live applications, including a multi-tenant AI voice platform with organization-level data isolation and usage-based billing. Experienced in database design and in integrating AI, authentication, payment and third-party APIs. Solid grounding in CS fundamentals (OS, networks, DBMS, algorithms) and active DSA practice.

Technical Skills

Languages: TypeScript, JavaScript, SQL, C, C++, Java

Frontend: Next.js, React.js, HTML5, CSS3, Tailwind CSS, shadcn/ui

Backend: Node.js, Express.js, tRPC, REST APIs

Databases & ORM: PostgreSQL, SQLite, Prisma ORM

Tools & Services: Git, GitHub, Clerk, Cloudflare R2, Vercel (Deployment), Inngest

CS Fundamentals: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

Projects

VAANI - AI Voice Cloning Platform — [Live](#) — [GitHub](#)

June 2026 – Present

Next.js, React, TypeScript, Prisma, PostgreSQL, Clerk, tRPC, Cloudflare R2, Polar, Chatterbox TTS

- Built a full-stack AI voice platform to browse built-in voices, create custom voices, and generate speech from text with the open-source Chatterbox TTS model deployed on Modal
- Implemented organization-based authentication, data isolation, and access control with Clerk and tRPC
- Integrated Polar subscription billing with usage-based metering (INR 0.002 per character, INR 2 per custom voice)
- Stored voice recordings and generated audio in Cloudflare R2, with voice, generation, and configuration metadata in PostgreSQL via Prisma
- Built configurable generation (voice, temperature, top-p, top-k, repetition penalty) with saved history, plus a responsive audio UI with waveform playback, previews, downloads, and searchable voice libraries

SAVE - AI-Powered Personal Finance Platform — [Live](#) — [GitHub](#)

May 2026 – June 2026

Plaid, Next.js, React, shadcn/ui, Prisma, PostgreSQL, Clerk, Resend, Inngest, Gemini API, Zod

- Built a full-stack personal finance platform with manual and bank-linked accounts, budgets, and categorized transaction tracking
- Integrated Plaid to link bank accounts and sync transactions automatically, handling new, updated, and removed records without creating duplicates
- Built Gemini-powered receipt scanning with image compression to handle large uploads within request size limits, cutting manual entry to a two-click confirmation
- Automated recurring transactions, monthly AI-generated spending reports, and 80% budget alerts using scheduled background jobs (Inngest) and email delivery (Resend)
- Added database-backed rate limiting (5 transaction creations per minute) to prevent abuse, and Recharts analytics across 7-day to all-time views

Certifications

CS50's Introduction to Databases with SQL – [Certificate](#)

2026

Harvard University

The Fullstack Developer Path – [Certificate](#)

Feb 2026

Scrimba (108+ hours)

Education

Self-Directed Full-Stack Development

Mar 2025 – Present

Built and deployed two full-stack applications, completed Scrimba Full-Stack Path and CS50 SQL

GATE Exam Preparation

Jun 2023 – Feb 2025

Core CS: Operating Systems, Computer Networks, DBMS, Data Structures, Algorithms

Pillai HOC College of Engineering and Technology

2019 – 2023

B.E. in Computer Engineering | CGPA: 8.75/10.0
