Professional Summary

Full-stack developer skilled in building end-to-end web applications using Next.js, React, TypeScript, and Node.js. Experienced in building responsive UIs, designing database schemas, and integrating AI, authentication, payment, and third-party APIs. Strong foundation in data structures and algorithms with 100+ problems solved.

Technical Skills

Languages: C, C++, TypeScript, JavaScript, Java

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, shadcn/ui

Backend: Node.js, Express.js, REST APIs

Database: SQL, PostgreSQL, Prisma

Tools: Git, GitHub

Projects

VAANI - AI Voice Cloning Platform — [Live](#) — [GitHub](#) June 2026 – Present
Next.js, React, TypeScript, Prisma, PostgreSQL, Clerk, tRPC, Cloudflare R2, Polar, Chatterbox TTS

- Built a full-stack AI voice platform enabling users to browse built-in voices, create custom voices, and generate speech from text using the self-hosted Chatterbox TTS model
- Implemented voice and generation data management, storing custom voice recordings and generated audio files in Cloudflare R2 while managing voice, generation, and configuration metadata in PostgreSQL through Prisma, with organization-specific access control
- Built configurable text-to-speech generation with selectable voices and adjustable temperature, top-p, top-k, and repetition penalty settings, while persisting generation history and generation parameters
- Implemented organization-based authentication and data isolation using Clerk and tRPC, while integrating Polar subscription billing and usage-based metering at INR 0.002 per text-to-speech character and INR 2 per custom voice creation
- Developed a responsive audio experience with audio controls, voice previews, audio download support, and searchable voice libraries

SAVE - AI-Powered Personal Finance Platform — [Live](#) — [GitHub](#) May 2026 – June 2026
Next.js, React, shadcn/ui, Prisma, PostgreSQL, Clerk, Plaid, Resend, Inngest, Gemini API, Zod

- Built a full-stack personal finance platform where users can manually create accounts or connect bank accounts through Plaid, manage budgets, and track and categorize transactions
- Implemented automatic bank transaction syncing through Plaid, handling new, updated, and removed transactions while preventing duplicate records
- Automated monthly financial reports summarizing income, expenses, net balance, and AI-generated spending insights via Gemini API, with 80% budget alerts scheduled through Inngest and delivered via Resend
- Built AI-powered receipt scanning using Gemini API to extract transaction details from uploaded receipts, reducing manual entry to a two-click confirmation
- Developed transaction analytics with Recharts, visualizing income, expenses, and net balance across 7-day, 1/3/6-month, and all-transaction views for each account, alongside a filterable transaction table
- Implemented custom rate limiting to 5 transaction creations/minute using database-backed checks to prevent abuse

Certifications

The Fullstack Developer Path Feb 2026
Scrimba (108+ hours)

CS50's Introduction to Databases with SQL Sep 2026
Harvard University

Education

Pillai HOC College of Engineering and Technology 2019 – 2023
B.E in Computer Engineering | CGPA: 8.75/10.0
